Co-Managed Identity

Identity is a Security Conversation

Identity Management tools are essential to your posture. But between building rules, setting and enforcing policy, managing tools, monitoring feeds and analyzing behavior, securing Identity isn't a full-time job—it's a dozen. Managed Services help, **but exporting your whole solution to a managed provider cuts you out of the loop.**

A Co-Managed solution presents the best of both worlds, in which a blended group of cybersecurity engineers and operations experts **runs, manages, and perfects tools over which you retain ownership**. Co-Managed Identity services provide constant eyes and expert analysis, and allow you to retain any improvements built over time.

Management
Expert operations, analysis & action

Operation (NOC). Our Network Operations Center keeps your solutions running 24x7 and provides regular environment health checks, as well as management of policies, configurations, change control and tuning.

Analysis & Action (SOC). Our Security Operations Center continuously evaluates issues, reviews real-time event priorities and provides responsive escalation. We create metrics, dashboards and reports, and we handle incident and ticket tracking.

Maturity Services
The bigger posture picture

Analysis. Regular health checks build a deep understanding of your complete environment.

Strategy. We work with your teams to help improve & leverage all existing resources to strengthen your posture and build your roadmap.

Engineering Services
Deep service bench, at your service

Integration. Nothing meets your unique requirements out of the box. We customize configurations to your needs, ensuring they fits within your posture and long-term strategy.

Invested Ownership. It's your solution. We'll keep tending, improving and fine-tuning it—and developing it with the rest of your posture and leaving the longterm benefits with you if and when your need for Managed Services comes to an end.

Ping Identity.
