

CloudGuard Remediation Services

**Dedicated Professionals.
Providing Remediation.
Cloud Assets & Services.**

Novacoast provides remediation on any findings from cloud assets and services that are scanned. We will also provide development of automation for remediations that are common or required as a base minimum for security in the customer environment.

Novacoast offers this through a flexible billing model of 16 hours of professional services per month to be used for a wide range of services including but not limited to: direct remediation in your cloud, creation of new Cloudbots and automation for remediation, custom integration into other data sources, or response tooling.

Cloud Intelligence Essentials: CloudGuard

Check Point & Novacoast combines security's best practices of signature detection, built-in rules, and threat intelligence feeds to create a baseline of your account activity. Through CloudGuard, built-in AI and anomaly detection algorithms spot potentially unauthorized or malicious activity within your cloud environments, including server-less applications. Administrators receive real-time policy violation and intrusion detection alerts based on user-defined criteria.

CloudGuard Remediation Services

How It Works

- **Remediate** - Cloud configuration issues through hands on remediation tailored to your environment and needs.
- **Services** - Provide custom development and infrastructure as code templates to optimize your cloud security.
- **Automation** - Create new automations and cloudbots to reduce menial tasks and ensure a base level of security.
